Pressures on the price of maize

After reaching a peak in summer 2022 due to the war in Ukraine, maize prices have been under pressure for several months. The global situation could ease in the second half of 2023, even though geopolitical risks remain.

European sole maize in 2023: a significant decline in planned sowing

While spring sowing has started throughout Europe, maize production faces a number of challenges, including the impact of the 2022 drought, an increase in costs and loss of competitiveness, reductions in livestock, etc. These factors have led to downgraded sowing forecasts for 2023.

/ Sector /

The french sector is backed up by a high performance organisation.

To achieve this high level of competence and productivity, French seed producers have joined forces and pooled their know-how within the FNPSMS interprofessional association. This is the only model of its kind in the world, enabling France to consolidate its European leadership and continue to be the world's leading exporter of maize seeds.
